BK RESOURCES

Installation Instructions for BKWCH-XXXX Wall Cabinets

STEP 1.

Locate the correct mounting location for your wall cabinet.

STEP 2.

Drill holes in the back of the unit at the correct spacing to allow secure mounting to the wall. Mounting into a wall stud is recommended.

STEP 3.

Use mounting hardware (not included) suitable for the wall studs present to mount the cabinet to the wall. (A good way to make this easier is to mount a board at the proper height under the unit and use it to support the cabinet while you are mounting it to the wall.)

STEP 4.

Once the cabinet is properly mounted, the gap between the wall and the cabinet must be filled with an NSF-listed caulk and made smooth to ensure its cleanability. This step must be taken to complete the unit and make sure that it passes the NSF standard for food equipment.
